

RoBERTa Failure vs SGD Improvement — Manager Report

Generated: 2026-02-23 16:47:00

Scope: Weak categories only (see Testing/weak_categories.txt and category_mapping.csv).

Purpose

This report lists **only** complaints where **RoBERTa's prediction was wrong** (different from the human-corrected category) and **SGD corrected it** after learning from feedback. For each such complaint we show: **original complaint**, **RoBERTa model prediction** (wrong), **SGD corrected category** (human feedback that SGD learnt), and **learnt status**. This proves where RoBERTa failed and how SGD improved using feedback.

Summary

- **Complaints shown (RoBERTa wrong + SGD corrected):** 24
 - These are weak-category complaints where RoBERTa's prediction differed from the corrected category and SGD learnt the correct category from feedback.
 - (From 47 weak-category feedback records, 24 met the "RoBERTa wrong, SGD corrected" criteria.)
-

Glossary

- **Original complaint:** Excerpt of the complaint text.
- **RoBERTa model prediction:** The (wrong) category RoBERTa predicted for this complaint; here it always differs from the corrected category.
- **SGD corrected category:** The category provided as human feedback; the target label SGD learns from.
- **Learnt status:** Yes = the system has stored this feedback (same complaint would show corrected category on re-submission).
- **Final prediction (current):** The ensemble's final label (combines RoBERTa + SGD); when learnt, this is the corrected category.

- **RoBERTa failed?:** Yes = RoBERTa's current prediction is different from the corrected category.
- **SGD improved?:** Yes = SGD's current prediction matches the corrected category (SGD learnt from feedback).
